TrueSight Cloud Cost

Optimize multi-cloud resource use and cost

PRODUCT DESCRIPTION

TrueSight Cloud Cost is a cloud expense management solution that optimizes cloud resource usage and costs, eliminating wasted spend and budget over-runs.

BUSINESS CHALLENGE

Digital transformation is driving rapid cloud adoption, causing a significant change in IT infrastructure buying practices along with a shift of IT capital expenditures to IT operational expenditures. This creates new challenges for IT organizations as they are unprepared for the complexity in identifying cloud resources needed and determining the best price models to use. With buyers of public cloud services throughout the organization, IT and business owners are often surprised with budget over-runs and overspending.

BMC SOLUTION

TrueSight Cloud Cost provides visibility and control of cloud usage and costs. With multi-tenant views, budget owners, project owners and stakeholders stay informed and in control of their cloud operational budgets. With automated recommendations and actions, cloud resource use remains optimized and eliminates wasted spend.

Using machine learning, anomalous spending is detected. This, along with thresholds and alerts on spend, keep budget owners informed and in control and prevent unexpected budget over-runs. The ability to establish and automatically enforce business guidelines ensure cloud buying and operations are compliant with business and regulatory policies.
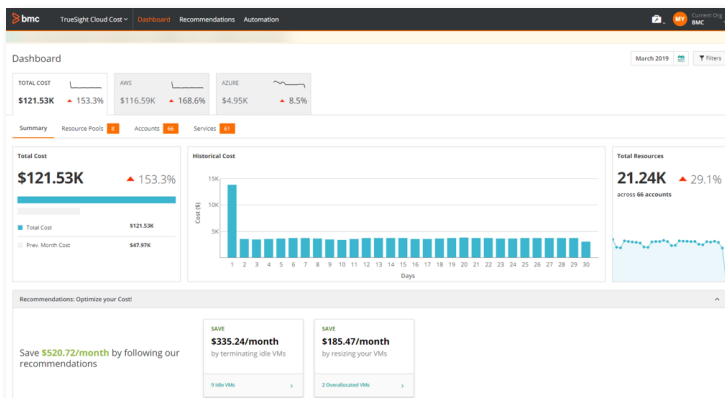

KEY FEATURES

TrueSight Cloud Cost optimizes multi-cloud resource use and costs.

- Custom self-service views of cost, budget, and resources
- Automated optimization recommendations and actions based on machine learning
- Identify and schedule workloads for cost efficiency
- Predict budget over-runs and send automated alerts
- Manage use of Reserved Instances

KEY BENEFITS

- Eliminate wasted spend
- Prevent budget over-runs
- Effectively use Reserved Instances
- Govern cloud usage
- Keep budget owners and stakeholders informed

View a summary of cloud resource usage and spend.

PRODUCT DETAILS

TrueSight Cloud Cost provides visibility and control of cloud resource usage and costs. Regardless of whether you are using one or more public cloud providers, you can effectively optimize resource use, manage budgets and eliminate wasted spend.

Visualize resource usage and costs: Create custom, self-service views based on business needs. Multi-tenancy ensures budget owners, business owners and stakeholders have a view of resources, budget and spend that is important to them.

Optimize resource usage: With machine learning and advanced analytics, areas for resource optimization are automatically identified. Automated recommendations and automated actions for right-sizing resources and terminating unused resources, such as idle virtual machines, are provided along with the associated cost savings.
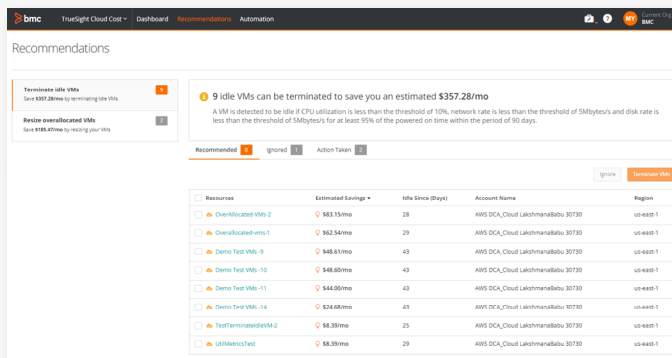

Establish power schedules: Receive automated recommendations for workloads that will benefit from a power schedule and the savings that can be recognized. You remain in control of which workloads you schedule and when they will be run.

Manage use of Reserved Instances: By analyzing usage patterns of both reserved instances and on-demand resources, you ensure the RIs you own are being used. In addition, automated recommendations for converting on-demand instances to reserved instances help you increase cost savings.
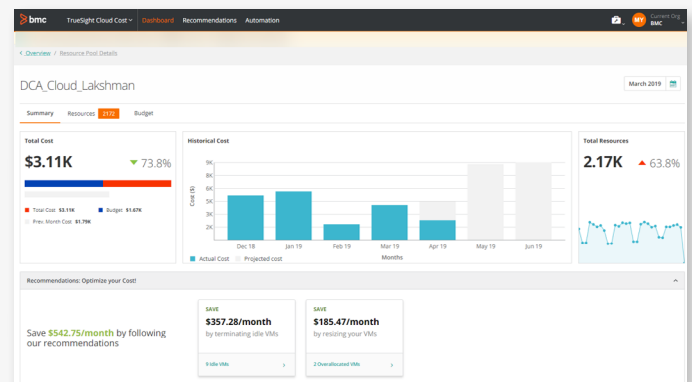

Predictive budget management: Machine learning automatically detects changes in spending patterns. Set thresholds for budget management triggering alerts so adjustments can be made to avoid unplanned spending and budget overruns.
